CCSVI Alliance promotes education and research about CCSVI, an exciting new medical discovery, and its relationship to Multiple Sclerosis (MS).

Through our website, CCSVI.org, and our educational forums, the Alliance supports patients, scientists, and physicians with research-based information about CCSVI.

CCSVI Alliance plays an essential role in facilitating the urgent but objective investigation of CCSVI. We welcome you to join us.

The Alliance advances CCSVI knowledge by engaging professionals across disciplines, and by promoting collaboration among patients, researchers, and physicians. Please visit our website, www.CCSVI.org, and join us in exploring this promising new discovery!

Chronic Cerebrospinal Venous Insufficiency (CCSVI) CCSVI is a syndrome characterized by abnormal blood drainage of the central nervous system due to defects in the veins carrying blood out of the brain and spine. Independent research across three continents has linked CCSVI to Multiple Sclerosis.
CCSVI was first documented in 2007, when an Italian team of vascular scientists, neurologists, and physicians applied advanced imaging methods to study the blood flow out of the central nervous system of MS patients. This initial research has spurred an urgent series of follow-up research by scientists around the world. A 2009 pilot study showed that CCSVI could often be corrected via angioplasty, and that once correct, MS symptoms and relapse rates significantly decreased for many patients.

CCSVI.org Provides Critical Information about CCSVI
The Basics presents an overview of CCSVI, including definitions of venous abnormalities, an explanation of CCSVI diagnosis, and multimedia examples of CCSVI. The Basics also provides a growing catalogue of exclusive video interviews with some of the world’s leading CCSVI scientists and treating physicians.

Advanced Topics provides comprehensive analysis of CCSVI treatment, efficacy, and patient risk. An extensive database contains relevant scientific journal articles, presentations, and abstracts.

Helping Myself offers patients tools and approaches for discussing CCSVI with physicians, for finding treatment providers, and for enhancing their vascular health.

Patient Perspectives provides real-world CCSVI patient treatment experiences, and answers common patient and caregiver questions.

Helping the Cause provides an overview of all current NIH and board-approved CCSVI clinical trials. Helping the Cause also offers a variety of ways to donate.
